

Canfresh Liquid Oxygen Bleach

Hydrogen Peroxide Cleaner

Alternative to Chlorine Bleach

This product is an effective liquid bleaching compound containing Hydrogen Peroxide. It is ideally suited for use in industrial applications.

Liquid Oxygen Bleach is an excellent alternative for bleaching operations where the use of chlorine bleach is undesirable, as in areas with high iron content.

Can be used safely on wools, silks and most synthetic fibres. Will not cause yellowing on white synthetic fibres, and may be used on coloured fabrics.

DIRECTIONS:

For use in commercial machines: It is recommended that this product be used in the wash cycle at 2 -3 oz per 50 lbs of fabric. Amount used will depend on soil and stain.

NOTE: Soaking may be required for very heavy or set stains.

For pre-soaking: Soak the laundry in product solution for 1/2 to 4 hours and then wash normally. Better results are obtained when some detergent or water conditioner is used along with the bleach in the presoaking.

It can be used as is for **spot bleaching**.

For Commercial Use Only
