

Canfresh Pristine Versatile

Colour-Enhancing Detergent

With Oxygen Bleach and Enzymes

Pristine Versatile is a high quality laundry detergent specially designed with color-safe oxygen bleach and enzyme stain removers for excellent soil removal, producing brilliant whites and vibrant colors.

The oxygen bleach activating system generates peracetic acid, allowing use at temperatures below 60 °C / 140 °F, reducing the energy demand of the system. This product is ideal for commercial laundering of colored and white cottons and mixed fabrics. For particularly stubborn stains, use it as a pre-soak.

This product is formulated entirely with biodegradable ingredients.

DIRECTIONS:

For use in commercial machines, add 4-6 oz. of detergent for each 50 lbs of dry fabric. Recommended temperatures for this system are between 48-60 °C.

For top loading domestic washers, add 1/2 to 3/4 cups per load. More may be required for heavy soil conditions. This product is ideally suited for high-efficiency domestic washers at a reduced amount.

For Commercial Use
